

HEALTH, SAFETY AND ENVIRONMENT

WiseEnergy pays always great attention to all aspects concerning safety and health, as well as protecting environment in all production activities it is involved.

The leading role of the “human resource” is wide recognized: one of the main key factors for achieving success in any activity is made of both professional and human contribution of people working in a mutual trust relationship environment.

This belief brought WiseEnergy to create its own service dedicated to Health Safety and Environmental (HSE) Management, composed of long time professionals highly skilled in the field of renewable resources.

This team, after some practicing, has elaborated a support program aiming at the compliance of companies not only with what Decree 81/2008 rules (also known as Testo Unico Sicurezza - T. U) but also, as far as environment is concerned, towards provisions of the Decree 152/2006 and other related rules.

Just consider the complexity of all the requests presented from GSE during inspection visits about coordination between client and O&M company, when part of the documentation required is made of:

- DVR that is the client company’s document of evaluation risks, edited respecting 81/2008 Decree (art. 17, 28 and 29).
- DUVRI that is the unique document of evaluation of interferential risks, edited respecting previous art. 26 of T.U.
- Procedures for managing emergencies, defined according to Decree 10/03/1998

If this is not enough, just add an audit activity with an accurate and detailed check about the compliance of contractors and their subcontractors through the collection and analysis of the Company’s documentation about carried out activity, with particular attention on both contractual and legislative obligations

Last but not least, all aspects about environment safeguard must be evaluated, with specific care on how waste is managed. Remember that waste produced by industrial activities is always classified as special or even dangerous. Moreover, a special management is dedicated to RAEE waste, that is electric or electronic waste.
