

WISEENERGY SOFTWARE HELPS YOU CONTROL GSE'S DOWN PAYMENTS

As explained in “*Modalità operative per l'aggiornamento della rata di acconto spettante per l'incentivo in conto energia agli impianti solari fotovoltaici*”, a Feed in Tariff (FiT) is paid on monthly basis by GSE (Gestore dei Servizi Elettrici).

On the 29th September 2017, GSE published these operational rules which are processed quarterly to assess the total production of the solar plants. The down payment of the FiT is paid on monthly basis, using calculations that show the estimation figures similar to the values of the actual energy produced by the solar plant.

WiseEnergy has developed a similar software that replicates the calculation made by GSE. This software allows us to manage and control the amount of the down payment and forecast all future FiT down payments for the following months. From this, our technical team are able to solve any customer problems such as when the meter is not functioning properly (following Resolution 595/2014).

Is your remote meter reading inefficiently?

Do you have some problems with production and values read by GSE?

Your monthly FiT payment could be downsized by 50%. WiseEnergy can help you to control your budget and to restore your monthly cash flow.
